Digital Jib Arm

May 2012

One of the problems with most low budget digital video productions is the lack of interesting camera movement. A small Jib Arm made specifically for digital video cameras is the perfect solution to this. We've taken the best features and highlights from all the different Jib Arms out there and have custom built our own. The Digital Arm is lightweight, portable and easy to use. Best of all, we've priced it lower than anything else on the market, so you can up your production value while sticking to your budget.

Rate Card

Pricing on the dolly is as follows:

- \$75/day for jib arm rental
- Additional items are extra - less discount (if applicable)
